***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to a buffered solution, classified in class 435/183, for example.
- II. Claims 16-31, drawn to a buffered solution, classified in class 536/25.3, for example.
- III. Claims 32-34, drawn to methods, classified in class 435/6, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombination and combination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a solution comprising a GTP-analogue has separate patentability as a pharmaceutical composition, for example. The subcombination has separate utility as protein preservative, for example.

Inventions (I or II) and III are related as products and process of use. The inventions can be shown to be independent and patentably distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the products can be used to polymerize DNA, for example.

This application contains claims directed to the following patentably distinct species of the claimed invention:

A. Select ONE blocker reagent:

- 1. Dextran;

Art Unit: 1641

2. polyvinyl alcohol;
3. poly(ethylene glycol);
4. poly(anetholsulfate);
5. poly(vinylsulfate);
6. CM-dextran;
7. dextran sulfate;
8. beta-cyclodextrin;
9. poly(acrylic acid);
10. poly(sodium 4-styrene sulfonate);
11. poly-glutamate acid;
12. DNA;
13. BSA;
14. casein;
15. dry milk; OR
16. wheat germ agglutinin.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 9, 16 and 25 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1641

Because these inventions are distinct for the reasons given above and the search required for each group is not required for the other groups, restriction for examination purposes as indicated is proper.
